

- The only product on the Polish market that both disinfects and removes scale, algae, etc. which reduce the patency of pipes and lead to clogging of drippers and capillary tubes
- Prevents clogged drippers from being replaced
- Solution based on acids, detergents, biodegradates and disinfectors
- After using Radal, you no longer need to use other solutions, such as hypochlorite or nitric acid
- Product is to be poured into the irrigation system through a mixer and left for at least 12 hours; the system is then to be rinsed with clean water until the water no longer foams
- Product sold as a concentrated agent, area of 1 hectare requires ca. 270 liters of the product
- With each year, Radal is gaining increasing recognition among gardening enterprises

RADAL
